

Mini-Lesson F: Evaluating Expressions

Evaluating an expression means...

To find the value of an expression when the variable is replaced by a given number.

Evaluate the following expressions if $x = 2$, $y = -2$, and $z = 5$

Ex. 1

$$2x - 3y + 4z$$

Ex. 2

$$3(x + y) - 2z$$

Ex. 3

$$5x - 3y$$

Ex. 4

$$z(2 + x) - 5y$$
